

## Y6 Computing (Computer Science)

National Curriculum	Knowledge	Skills	Y5 Vocab	Y6 Vocab
<ul style="list-style-type: none"> <li>• Design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts.</li> <li>• Use sequence, selection, and repetition in programs; work with variables and various forms of input and output.</li> <li>• Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs.</li> </ul>	<ul style="list-style-type: none"> <li>• Understand the importance of the order of code.</li> <li>• Understand why code does not respond when an input is not recognised.</li> <li>• Understand the effect of changing a variable.</li> <li>• Understand that loops are efficient ways of coding.</li> <li>• Understand how computer programs can be applied to real life situations and physical systems.</li> </ul>	<ul style="list-style-type: none"> <li>• Use an 'if' command to test an input.</li> <li>• Use variables to perform more complex calculations using * and /.</li> <li>• Modify the name or value of a variable.</li> <li>• Modify the direction or length of an object by numerical values or a variety of commands.</li> <li>• Import an object.</li> <li>• Use a loop to draw a shape.</li> <li>• Generate a random number.</li> <li>• Combine a variety of commands to create the desired outcome.</li> <li>• Add and retrieve items to and from an array</li> </ul>	<ul style="list-style-type: none"> <li>• HTML</li> <li>• Tag</li> <li>• Paragraphs</li> <li>• Headings</li> <li>• Jpg</li> <li>• png</li> <li>• img src</li> <li>• graphics</li> <li>• source</li> <li>• CSS</li> <li>• Pixels</li> <li>• Font (family &amp; size)</li> <li>• Background</li> <li>• RGB</li> <li>• Hexadecimal</li> <li>• Margin</li> <li>• Padding</li> <li>• Hyperlink</li> <li>• URL</li> <li>• br</li> </ul>	<ul style="list-style-type: none"> <li>• Input command</li> <li>• Input/Output</li> <li>• If</li> <li>• Selection</li> <li>• Password</li> <li>• Modify</li> <li>• turtle.turtle()</li> <li>• Import</li> <li>• Pixels</li> <li>• Loop</li> <li>• Range</li> <li>• For</li> <li>• Generate</li> <li>• Random</li> <li>• Coordinates</li> <li>• Array</li> </ul>
Units to Teach	Key Questions			Maths Links
<ul style="list-style-type: none"> <li>• Python – Introduction to Python</li> <li>• Python – Python Graphics</li> <li>• Python – R Numbers &amp; Simulations</li> <li>• Python – Python Functions</li> </ul>	<ul style="list-style-type: none"> <li>• <i>Why do you think coders often work in pairs?</i></li> <li>• <i>What are the advantages of pair programming?</i></li> </ul>	<ul style="list-style-type: none"> <li>• What do you understand pixels to mean in Python?</li> <li>• What function does the penup command have?</li> </ul>	<ul style="list-style-type: none"> <li>• Coordinates</li> </ul>	
Previous Learning		Future Learning		
<ul style="list-style-type: none"> <li>• Begin to understand that there are multiple programming languages used for a variety of reasons.</li> <li>• Understand the web-sites are built using HTML.</li> <li>• Create a simple program in HTML.</li> <li>• Resize and image and set the pixel size of an image in html.</li> <li>• Change the colour, font and size of texts within html.</li> </ul>		<ul style="list-style-type: none"> <li>• Design, use and evaluate computational abstractions that model the state and behaviour of real-world problems and physical system</li> <li>• Understand several key algorithms that reflect computational thinking use logical reasoning to compare the utility of alternative algorithms for the same problem.</li> <li>• Use 2 or more programming languages, at least one of which is textual, to solve a variety of computational problems; make appropriate use of data structures design and develop modular programs that use procedures or functions</li> </ul>
